Features AutoCAD features a sophisticated set of features to help the user prepare a design. These include tools to assist the user in the preparation of 2D and 3D drawings. Some of these features are functional to other CAD programs as well. Most important for the user, however, is the set of standard components (elements) with which to create drawings. AutoCAD is an all-in-one CAD program with almost no support for other CAD programs. Many other programs, however, support functionalities similar to those provided by AutoCAD. For example, the use of parametric modeling to create a single component (element) that can be scaled in any direction by changing a single parameter is similar to that in AutoCAD. A complete set of operations, including data entry, editing, display, data analysis, and documentation are available. These operations are combined in AutoCAD into functional components (called commands) which are accessed by clicking on an icon on the task bar. The user's interface can be customized by modifying the window layout. The display includes: Time scale (time and date are synchronized) Drafting areas A dynamic ruler (a horizontal and vertical axis) An overlay (an area on which drawings are drawn) Drawing screen (a canvas on which drawings are drawn) Grid Navigation tools 3D annotation 2D annotation Spatial data The user interface can be customized. The main interface includes: Task bar Toolbar Dialogs Data panel Elements panel Data definitions Macros Working memory Data exchange Layer manager File menu Help menu Task bar The task bar is a quick access bar at the bottom of the screen that provides access to the most commonly used commands. The toolbar is a quick access bar at the top of the screen and is accessible by clicking on the mouse's left button. The icons are movable and can be added to the screen's working memory. The dialogs have a detailed user interface. Drafting areas The drafting areas includes three plan view areas, including: Undo History History Context menu The right-click menu on the mouse is accessible from the interface and from any window. It includes: Undo Redo [PC]/

CODDINGTON, Plaintiff, v. Thomas G. OLSON, et al., Defendants. No. 94-2509-JWL. United States District Court, D. Kansas. November 3, 1994. Wayne H. Coddington, pro se. Eldon M. Karsney, U.S. Attorney, Wichita, KS, for defendants. MEMORANDUM AND ORDER LUNGSTRUM, District Judge. This matter comes before the court on defendants' motion for summary judgment. Plaintiff, appearing pro se, alleges that defendants, who are the United States Attorney and the Executive Director of the Bureau of Prisons, denied him parole based on an unconstitutional condition of confinement, specifically the intrastate nature of the Kansas State Penitentiary where plaintiff is confined. The court is aware that the Federal Rules of Civil Procedure do not require an evidentiary hearing when ruling on a motion for summary judgment. "Summary judgment procedure should be used to pierce the boilerplate of the pleadings and analyze the case." Crow v. Lash, 628 F.2d 1218, 1224 (7th Cir.1980). However, the court may dismiss a complaint without holding an evidentiary hearing when the plaintiff has failed to set forth specific facts that if true would entitle him to the relief he requests. Moseke v. Miller, 721 F.Supp. 284 (D.Kan.1989) (citing Balint v. Carson City, Nev., 180 F.2d 738 (10th Cir.1950)). Thus,

where a plaintiff's response to a motion for summary judgment fails to demonstrate that there is a genuine issue of material fact, or fails to state specific facts to support his claims, the court may grant summary judgment as a matter of law. Id. The facts relevant to the defendants' motion for summary judgment are not in dispute. Plaintiff is an inmate at the United States Penitentiary in Leavenworth, Kansas.
